

Consider the following relational schema

Student(idno:integer, name:string, year-sem:string, branch:string)

Course(courseid:string, course_name:string, credits:integer)

Registration(courseid:string, idno:integer, grade:string)

Student:

IDno	name	Year-sem	branch
212	raju	2-1	cse
213	latha	2-1	cse
311	veena	3-1	cse

Course:

courseid	Course_name	credits
CS301	COA	4
CS201	DBMS	3
EN201	English	2
EC201	IoT	3

Registration:

courseid	IDno	grade
CS301	311	A+
CS201	212	A
EN201	212	B
CS201	311	A
CS301	213	B+

Write Queries for the following Questions:

1. Display names of all courses
2. Display names of courses with credits above 3
3. Display details of the courses with highest credits
4. Display course ids in which student 212 got A grade
5. Display names of the students who got A grade in any course
6. Display names of courses which got registrations
7. Display names of courses which did not get any registrations
8. Display count of the courses registered by student 311

9. Display count of the courses registered by student 'latha'
10. Display course ids along with grades of the student with id 213
11. Display course ids along with grades of the student 'raju'
12. Display names of students who have registered for DBMS
13. Display course names registered by 'veena'
14. List all the student names and idno.s who registered for course with id "CS301" and are from "2-1" and "cse"
15. List the student names who registered for a course with maximum credits
16. Find the student idnos who registered for any one of the courses named "DBMS", "English"
